

**Fmuser****FUTV4622 DVB-T****Encoder & Modulator with USB****--HomeUser****User Manual**

Thank you for buying this encoder modulator.

Please read this manual carefully to install, use and maintain the encoder modulator in the best conditions of performance. Keep this manual for future reference.

# CHAPTER 1 Product Introductions

## General Description

FUTV4622 series HD encoder & modulator is FMUSER's consumer electronics which allow audio/video signal input in TV distributions with applications in home entertainment, surveillance control, hotel Digital Signage, shops etc.

It is an all-in-one device integrating MPEG-4 AVC/H.264 encoding and modulating to convert audio/video signals into DVB-T RF out.

The signals source could be from satellite receivers, closed-circuit television cameras, Blue-ray players, and antenna etc. its output signal is to be received by a DVB-T standard TVs or STBs etc.

## Technical Specifications

### HDMI Encoding Section

<b>Video</b>	Encoding	H.264 MP@L3.0/3.1/4.0	
	Interface	HDMI*1	
		Input	Output
		480i@59.94/60FPS	480p@30FPS
		576i@50FPS	576p@25FPS
	Resolution	720p@50/59.94/60FPS	720p@50/59.94/60FPS
		1080i@50FPS	1080p@25FPS
<b>Audio</b>	Aspect Ratio	16:9, 4:3	
	Bit rate	1.000~18.000 Mbps	
	Encoding	MPEG1 layer 2	
	Sample rate	48KHz	
	Bit rate	64, 96, 128, 192, 256, 320kbps	

### DVB-T Modulator Section

Standard	DVB-T COFDM
Bandwidth	6M, 7M, 8M
Constellation	QPSK, 16QAM, 64QAM,
Code rate	1/2, 2/3, 3/4, 5/6, 7/8.
Guard Interval	1/32, 1/16, 1/8, 1/4
Transmission Mode:	2K, 8K
MER	31dB
RF frequency	142.5~858 MHz, 1KHz step
RF output level	-14 ~ +6dBm, 0.1db step

### System

RF mix in ATT	10 dB
Management	LCD + control buttons
Language	English
LCN Insertion	yes
Upgrade	USB

### General

Power supply	DC 12V
Dimensions & weight	183*110*50mm / <1kg

## CHAPTER 2 Safety Instruction and Installations

### Safety Instructions

**WARNING:** Hot plug is not allowed since it may cause system halted.

To prevent fire or electrical shock, do not expose the device to rain or moisture.

The encoder modulator is powered with a voltage of 12V DC. The power supply voltage must not exceed the recommended voltage, which otherwise may cause irreparable damage to the device and the invalidation of the warranty. Therefore:

- | Do not replace power supply with a voltage greater than 12V DC.
- | Do not connect the device to the power if the power cord is damaged.
- | Do not plug the device into mains supply until all cables have been connected correctly.
- | Do not cut the cord.

Avoid placing the device next to central heating components and in areas of high humidity.

Do not cover the device with elements that obstruct the ventilation slots.

If the encoder modulator has been kept in cold conditions for a long time, keep it in a warm room minimum 2 hours before plugging into the mains.

Mount the device in vertical position with the connectors located on the top side.

When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part.

Unauthorized substitutes may result in fire, electric shock or other hazards.

Safety check- Upon completion of any service or repairs to this device, ask the service technician to perform safety checks to determine that the device is in proper condition.

### Installations

#### RISK of damage to the unit

Mechanically handling the unit may result in damage. Do not connect the unit to the power supply before or during assembly. Connect the unit as below instructed.

#### NO HOT PLUG AND CONNECT THE CABLE AS FOLLOWING STEPS.

1. Mount and tighten the screws and plugs to secure the unit to the wall. Left 10 cm of free space around from each unit.]

2. Connect the signal input in the respective connectors. The signal source can be from a surveillance monitor, DVD, set-top box, CCTV and etc.

3. Optionally, connect the loop-through RF input coaxial cable.

4. Connect cable to RF output to STB/TV.

5. Power supply connection: a) Connect the earth cable; b) Connect the power plug to the unit mains connector; c) Connect the power plug to the mains socket.

## Cascade Installation

FUTV4622 unit has 1 TV signal to RF output encoded as DVB-T Digital TV signal.

Several FUTV4622 units can be cascaded in order to increase the capacity. The maximum capacity of a series of N units is  $1 \times N$  incorporated TV signals. To cascade 2 or more units, connect the RF output of the preceding unit to the TV input (loop-through) of the next unit (see right illustration).

## Typical Applications

...for communities of residents  
an information channel on their television

...for restaurants  
information about daily menus ,special deals,etc

...for hotels  
meeting rooms,exhibitions,message,etc

...for hospitals  
training courses, healthy guide, etc

...for Public Spaces  
advertising,user information,news,etc

...for shopping centres  
new collections,special deals,etc

Create your own advertising and information  
channel using only your **FUTV4622 Encoder Modulator**

## CHAPTER 3 Operations and Management

FUTV4622 is controlled and managed through the key board and LCD display.

**LCD Display** – It presents the selected menu and the parameter settings. The backlight in the display is on when the power is applied.

**LED** – These lights indicate the working status

- | Power: It lights on when the power supply is connected.
- | Alarm: It lights on when there is error, such as the signal source loss.
- | Lock: It lights on when the signal source connected and goes off when the signal lose.

**Left/Right/Up/Down buttons** – Use these buttons to turn the screen pages, shift the target items by moving the triangle, or change the parameter settings in the program mode.

**Enter** – Use this button to enter a submenu or save a new setting after adjustment; press it to start adjusting the value of certain items with Up/Down buttons when the corresponding underline flash;

Press it to activate the hidden selections and change the setting with Up/Down (or Left/ Right) buttons.

**Menu** – Press this button to step back

**Lock** – Locking the screen / cancelling the lock state, and entering the main menu after the initialization of the device. After pressing lock key, the system will question the users to save present setting or not. If not, the LCD will display the current configuration state.

When the power is connected, the LCD will start to initialize the program. The LCD menu goes as below chart.

- 1) DVB-T: modulating standard; XX.XXX MHz: the current output frequency; 1080i: video resolution of signal source; X.XX Mbps: the current encoding bit rate
  - 2) Alarm Status: For example, if the signals lose, it will give alarm and display error type under this menu. For example: *Video 1 Not Lock*
  - 3) Uptime: It displays the working time duration of the device. It times upon power on.
  - 4) Encoder Parameters: User can enter the items respectively to set Encoder parameters.  
**Video in Status:** User can view the video status under this menu. **Resolution:** signal source resolution, read-only. **Video Bit rate:** adjust in the range of 1.000~18.000 Mbps. **Audio Bit rate:** Select audio bit rate among 64, 96, 128, 192, 256, 320kbps. **Audio Format:** audio format is default to MPEG-1 Layer 2.
  - 5) Stream: User can view or adjust TSID, ONID, Network ID, Network Name, Provider Name, Program number, LCN (Logical channel number), PMT PID, Video PID and audio PID after enter this menu.
  - 6) Country: User can choose country under this menu. There are three options Default, Australia or New Zealand. If user chooses Default, modulating parameters need to be set manually through advanced configuration. If choose other two, user do not need to set RF frequency, Bandwidth, Constellation, FEC, FFT, Guard interval and RF Level. It will configure automatically according to the Country. It is a shortcut.
  - 7) Channel: User can choose Channel under this submenu.
  - 8) Bit Rate: User can read the current modulating bit rate and the maximum bit rate
  - 9) RF Frequency: Adjust it at range of 142.5 MHz to 858 MHz. Set it according your regional situation or inquire your local services.
  - 10) Bandwidth: choose between 6M, 7M and 8M.
  - 11) Constellation: DVB-T modulator contains 3 constellation modes – 64 QAM, QPSK and 16 QAM.
  - 12) FEC: Forward Error Correction rate. It contains 1/2, 2/3, 3/4, 5/6 and 7/8.
  - 13) FFT (Transmission Mode): Select between 2K and 8K.
  - 14) Guard Interval: Select among 1/32, 1/16, 1/8 and 1/4.
  - 15) RF Level: Adjust it at range of -14~ +6dBm.
- Ø **NOTE:** The different combination of bandwidth, constellation, guard interval and FEC (code rate) will form a different output code rate. Please refer to appendix table 2. To ensure the output image quality, it is required the output code rate to be higher than 22 MHz.

- 
- 16) Save Config: Yes/No-to save/give up the adjustment of setting.
  - 17) Load Saved CFG: Yes/No-to load/ not to load the saved configuration.
  - 18) Factory Reset: Yes/No-choose/not choose the factory's default configuration.
  - 19) LCD Time out: A time limit that LCD will light off. Choose among 5s, 10s, 45s, 60s, 90s and 120s (seconds).
  - 20) Key Password: to set a 6-digit password for unlocking the keyboard.
  - 21) Lock Keyboard: Choose Yes to lock the keyboard, then the keyboard will be locked and cannot be applicable. It is required to input the password to unlock the key board. This operation is one-off. (Password forgotten, please use the universal code “005599”.)
  - 22) Product ID: User can view the serial number of this device. It is read-only and unique
  - 23) Version: It displays the version information of this device. *Encoder Modulator*: the name of the device; *Ver*: version number of this device.

## CHAPTER 4 How to Upgrade

FUTV4622 encoder modulator is embedded with USB Port for upgrading. The supported file format is IMG.

**Upgrade steps:** Insert USB device   Upgrade automatically(It will need 10-20 seconds to upgrade. After upgrade, FUTV4622 will reboot automatically.)   Remove USB device  
Power off   Power on.
